

# Xerox Services: Demanding Innovation through Technology Enablement

Jeff Frazer, Country Head, Xerox Services Canada,  
Finance Accounting & Procurement Services  
FEI Conference: Niagara Falls, June 6, 2014

# Discussion Topics

- About Xerox Services – Finance Accounting and Procurement Services
- Research Studies: What do Senior Finance Executives need to Focus on?
- Challenges Facing Accounting & Finance Executives
- How Can Technology Solve some of these Challenges
  - Enabling Processing Platforms (short video)
  - Simplification Tools & Technology
  - Reporting & Analytics

# About Xerox Services – Finance Accounting and Procurement

We are the world's largest enterprise for document and business process management.

- Over **\$23B in revenue**, **140,000** employees, 160 countries
- Today more than \$12B in Revenue comes from Services
- Providing managed print and document services to organizations in Canada since 1994
- Over 400 services contracts in Canada with **300 customers**
- Xerox acquired Affiliated Computer Services (ACS) in 2009 to strengthen its Services capabilities worldwide: **F&A, Call Centre, HR, Specialized Services**

## Finance, Accounting and Procurement Services

- Recognized by Gartner: **Magic Quadrant Leadership 2012, 2013**
- **39,000 FTE** in 92 Delivery Centres Globally
- 7200+ FTE in **17 FAP Centres of Excellence** Globally
- **200 Clients** delivering services in Procure to Pay, Order to Cash, Record to Report and Corporate Decision Support.
- Benefits include:
  - **30-50% cost reduction**, scalability of operations globally, tools and technology enablement, increased control, accuracy and speed of reporting,

# What do Senior Finance Professionals need to focus on?

Research Studies show that the Senior Finance Executive needs to focus on / support strategic initiatives such as:

- Growth Initiatives, (Global and National)
- Improvement in Competitive Position
- Mergers, Acquisition, Joint Ventures/Partnerships
- Striving to envision the future of the organization and prepare for that future

Other Key Accounting and Finance Activities relate to:

- Developing people within the finance organization
- Mitigate Enterprise Risk
- Drive Integration Across the Enterprise

When there are so many challenges in an Accounting and Finance organization, How can Finance Executives focus on these Strategic Initiatives?

# Challenges Facing Finance & Accounting Organizations

**Streamlining Processes and improving Productivity** is the single most important Challenge facing Accounting and Finance Organizations

Achieving **Enterprise real time visibility** across the organization

Also of critical importance the **ability of the CFO to be the Transformation Leader** and influencer of change

**Table 1. Importance of Challenges Facing Accounting and Finance Organizations**

	Of Critical Importance	Very Important	Important	Slightly Important	Not Important at All	Percentage Responding at Least "Very Important"
Streamlining processes and improving productivity	35.7%	42.2%	19.5%	1.6%	1.1%	77.8%
Improving the management reporting cycle	15.6%	44.1%	26.3%	12.9%	1.1%	59.7%
Achieving real-time visibility across your organization	17.5%	39.3%	31.7%	8.7%	2.7%	56.8%
Becoming the Transformational CFO—being an influencer of change across your organization	11.8%	40.4%	32.9%	9.9%	5.0%	52.2%
Running a global business efficiently	25.6%	26.4%	27.1%	12.4%	8.5%	51.9%
Handling financial consolidation efficiently	14.4%	32.7%	34.6%	12.4%	5.9%	47.1%
Upgrading your company's ERP/ business systems	11.7%	32.2%	29.2%	15.2%	11.7%	43.9%
Spending fewer cycles on the period close	8.4%	32.4%	34.1%	16.8%	8.4%	40.8%
Improving collaboration in the disparate finance organization	6.3%	32.1%	32.7%	18.9%	10.1%	38.4%
Accelerating the invoicing processes	9.2%	25.4%	35.3%	19.7%	10.4%	34.7%
Connecting the finance team with the front office	5.6%	28.7%	39.9%	21.9%	3.9%	34.3%
Automating order management	5.8%	18.8%	36.4%	25.3%	13.6%	24.7%

“Rising Challenge” research conducted by the IMA and study authored by Raef Lawson VP Research for the IMA

# Major Transformational Levers

*To achieve significant transformation our teams need to focus on the major leverage points.*

## Service Delivery Models

- Global Business Services
- Shared Services
- Insourcing / Outsourcing
- Rightshoring

## Policy

- Best Practices
- Support Compliance
- Flexibility for Customers, Employees & Vendors

## Process

- Global Standardization
- End-to-End Management
- Best Practices
- Touchless processing

## Technology

- Platform Upgrade & Enhancements (ERP & wrapper platforms)
- Automation Technology
- Reporting & Analytical Tools
- Process Management Tools

## Data / Analytics

- Master Data Standards
- Benchmarking
- Standard Reporting Dashboards
- Analytics Portals/Tools (e.g., spend analytics)

## People/Talent

- Skills Alignment
- Skills Enhancement
- Change Management

# Gartner 2012 Prediction related to Technology Enablement:

*In 2012, Gartner predicted that existing ERP systems will gradually be augmented by cloud-based business process as a service (BPaaS) offerings - automated, remote services accessed via the internet that are designed to meet specific business needs, such as payroll, A/R, A/P or procurement.*

*These BPaaS offerings are also called “PETS” or “Process Enhancement Technologies and Services.*

*These are called BPaaS add-ons or “PETS” (Process Enhancement Technologies and Services) PETS can be grouped into three classes of technologies, serving increasingly complex business needs.*

- **Level 1 PETS** – Integrate data - i.e. Customer, Supplier employee information into an organizations core applications through digitization of documents
- **Level 2 PETS** – Enhance the core applications – i.e. credit & collections tools that improve on ERP functionality and providing enterprise visibility
- **Level 3 PETS** – Augment existing analytics capabilities

# Key Technology Challenges

Optimizing provider and client technology strategies, investments and resources is always a balancing act.

## Technology Ownership

- Client or service provider ownership
- Prior & ongoing investment
- Loss of control concerns & challenges

## ERP vs. PETs

- Not an either/or situation
- Where PETs excel
  - Multiple ERPs
  - ERP functionality lags
  - Greater efficiency

## Access to Data

- ERP is the key source system
- Citrix environments
- Greater collaboration

## Other

- Integrating SMAC - Social, Mobile, Analytics, Cloud
- Migrate, Automate, Eliminate vs. Eliminate, Automate, Migrate
- Funding - Contractual frameworks need to carefully address transformation

# Technology Strategy

*To enable technology driven services and Finance & Accounting transformation technology strategy should be focused on four key areas.*

Processing Platforms

Simplification Tools

Reporting & Analytics

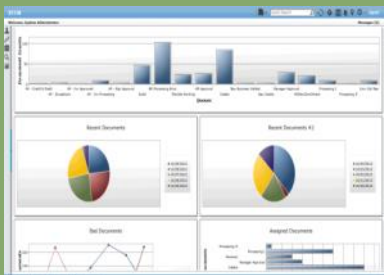

Process Management Tools

# Enabling Processing Platforms

## Procure to Pay

### Key Activities

- Spend Analytics
- Sourcing
- Procurement
- Accounts Payable

### Business Benefits

- Improves discount management
- Improves productivity
- Improves supplier management & compliance
- Payment rebates

## Order to Cash

- Customer segmentation
- Credit Mgmt.
- Cash Applications
- AR Mgmt.
- Disputes & Deductions
- Collections

- Improves working capital performance
- Lowers bad debt
- Increases productivity
- Greater transparency

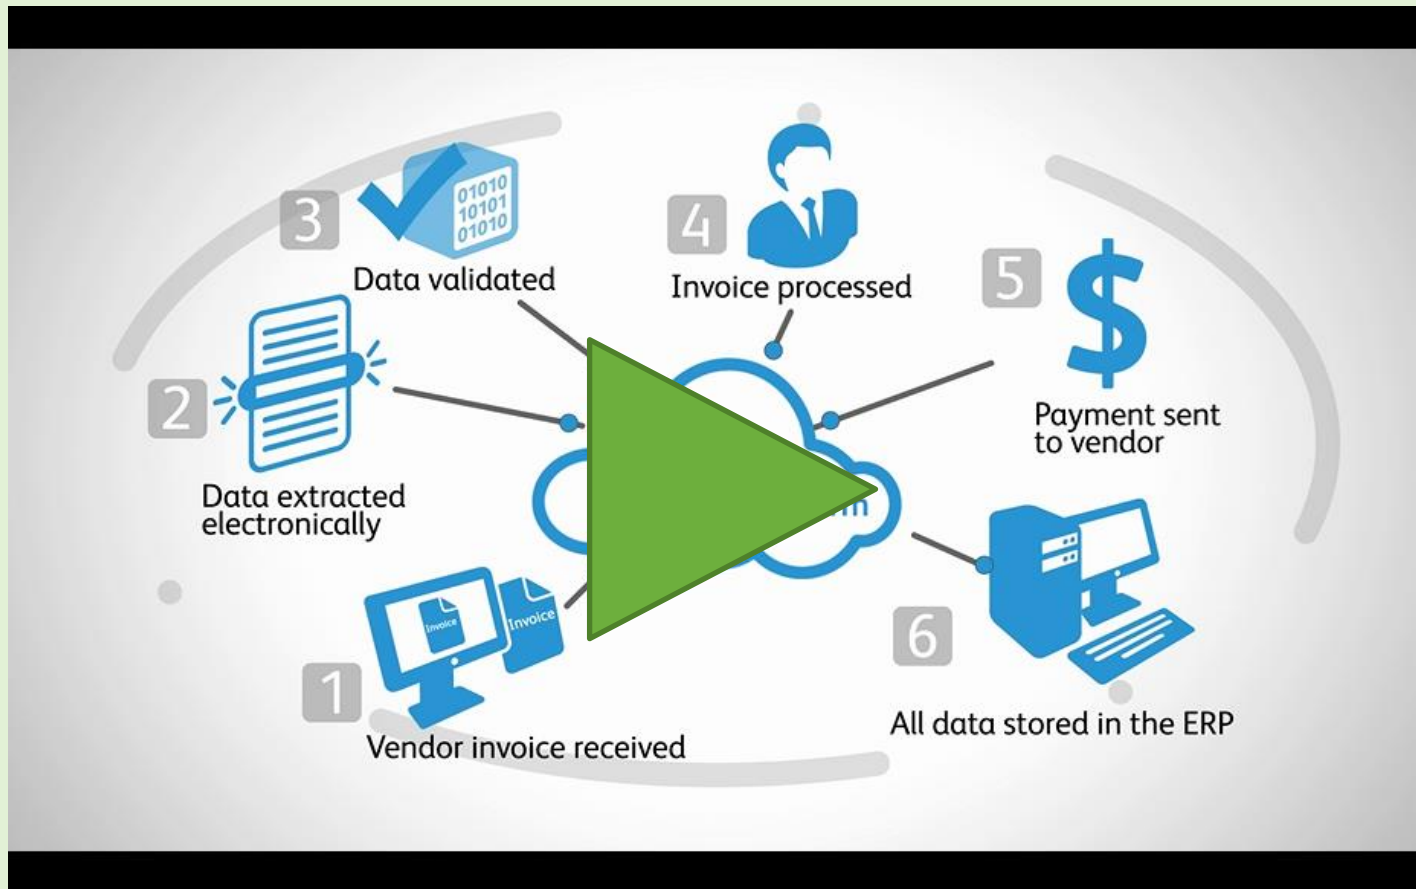

## Record to Report

- Consolidation Integrity
- Close Management
- Transaction matching
- Journal Entries
- Account Reconciliations
- Variance Analysis

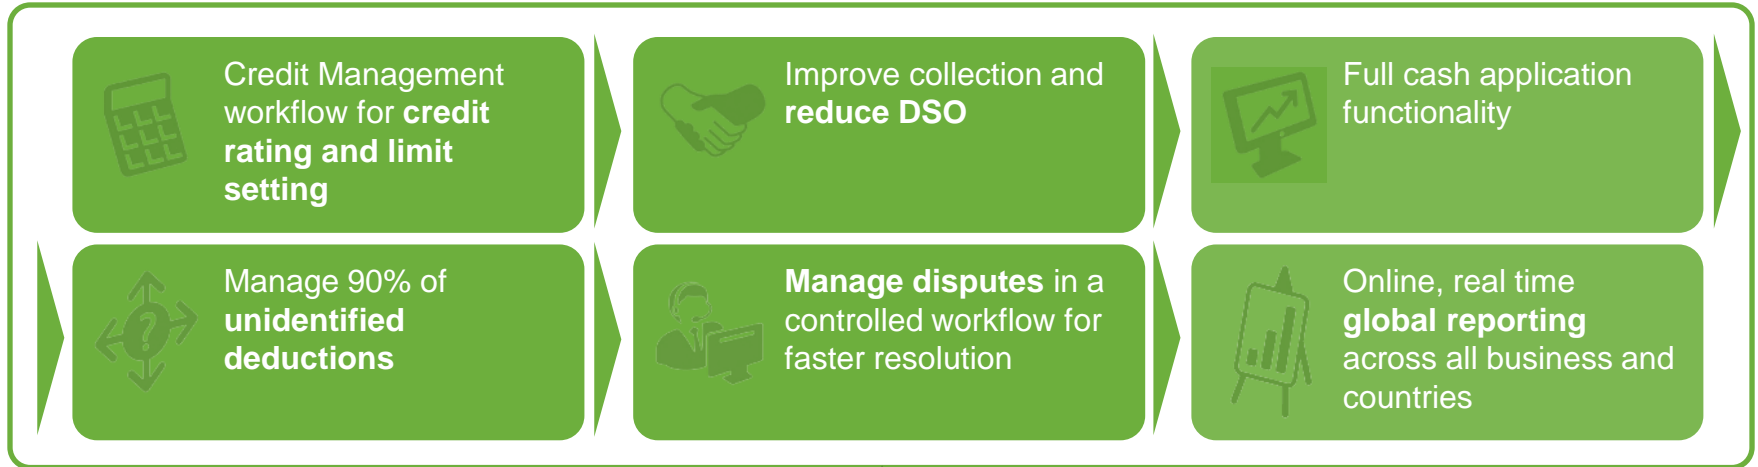

- Mitigates risk of virtual team
- Improves productivity
- Greater transparency

# AP Platform – Next Generation

# Credit Cash and Collections Platform

## CVG Value+: Functional Areas

Global Services and Support Teams

Manage Teams Remotely

Local Pilot to Global Implementation

# Simplification Tools - Computerized Processors / Robots

## The Concept

Proprietary technology to automate manual rules-based activities

- Appears to be a 'really fast person'
- A tool that enables operational changes without system changes
- Interfaces through the User Interface (buttons, text fields, drop down lists, etc.,)
- Read/write data from external system(s)
- Makes complex decisions based on live data on the screen or passed into AutoBot

## Human vs. Machine (AutoBot)

Human 🧑

- Transcribe data from paper and/or images\*
- Talk to other humans and transcribe data retrieved from conversation\*
- Make true judgment-based decisions

*If 2 different people look at the same data and come up with two different conclusions and **both are right** – judgment call versus  
If 2 different people look at the same data and come up with different conclusions and **one is right and one is wrong** – not a judgment call*

\* A combination of technologies (e.g., OCR & Autobot) may reduce the level of manual effort

Machine 🤖

- Log-in and navigate Mainframe, Web, MS Office and Windows systems
- Retrieve data from systems
- Copy/paste data between systems
- Follow business rules
- Perform complex logic evaluation and follow pre-defined process flows
- Take human-transcribed data and "plug" into systems
- Easily cloned to provide additional production capacity

### Illustrative Example – Highly Manual

### Illustrative Example - AutoBot Opportunity

**Key Benefits: Reduces manual work, improved consistency & quality, reduces costs**

# Simplification Tools – Call Handling Automation (Call Simplicity)

## The Concept

Proprietary technology to automate manual steps associated with a call

- Interface platform
- Focus on major calls types
- Automates manual look ups, searches and navigation through multiple source system screens
- Highly intuitive
- Reps are prompted through scripts

### Takes What was Complicated...

- Multiple software programs layered window-over-window
- Need to access multiple screens to gather information
- Several database look ups to find information
- Manual cut-paste processes
- Months of training in systems and what-if scenarios

### Makes Simple.

- A single-prompted touchscreen interface
- Focuses on major call types
- Highly intuitive – reps can handle a live call with limited training
- It works for technical and business process oriented calls – any calls supported by data queries, scripts, and information sources

**Key Benefits: Improved quality & shorter call handling times - reduces manual work, improves consistency & quality, reduces training time and processing costs**

# Reporting & Analytics

## The Concept

Reporting & analytics are critical for process excellence and improving business performance

- Robust standard reporting with drill down capabilities – region, country, business units etc. and flexibility to create on demand reports
- Benchmarking insights and dashboard to help guide and integrate with process transformation
- Access to other types of spend analytics
- Linking structured and unstructured data to provide new insights

**Key Benefits:** Provides greater information transparency; reduces manual effort to prepare reports; increases focus on analytics & insights

# Conclusion

Technology Enablement does solve some of the challenges facing Senior Finance Executives.

These technologies create significant process improvement result in:

- Streamlined Processes
- Standardized Processes
- Productivity
- Enterprise Visibility of Data
- Significant Cost Reduction
- Assist in Process Change – Transformation Leaders
- Free up F&A Executives' time to focus on “Strategic Initiatives”
